Portfolio GitHub LinkedIn

Software Engineer | Backend (Go, Python) & Systems | Open to relocation

+91-8178702851 ◇ abhinav.saxena1730@gmail.com ◇ New Delhi, India

SUMMARY

Backend software engineer with production experience in Go and Python. Has shipped 6+ products across 7 live deployments, designing, building, testing, deploying and maintaining REST APIs, data pipelines and integrations, and owning each project's priorities and deliverables with little supervision.

EXPERIENCE

Full Stack AI Developer **Sep 2025 – Current**

TechlyAssist — Remote

- Built a **Go backend service** for e-signature and legal-contract workflows, implementing secure document signing and verification end-to-end.
- Built and shipped backend services and **REST APIs in Python, Go and Node.js** across **6+ products and 7 live deployments**, owning each from design and implementation to deployment and production debugging.
- Built a **data pipeline** that ingests unstructured job postings, transforms them into structured records and routes them to embeddings and vector search, processing **200 jobs per hour**.
- Cut production data-load latency **from 10–15s to 2–6s (60–80% faster)** by serving assets through Cloudflare's CDN and preloading data at user login.
- Deployed and ran services with **Docker**, Git, PM2, Render and Vercel, and integrated third-party services (Resend, WhatsApp API, LLM APIs), debugging across application code, infrastructure and external services.

Production Projects – textraj.com, AGA, kalki.now, llamalink.co.in, Enlightenment Universa, SmartMeet, UAIN

PROJECTS

- **Hulchul** | Next.js, Node.js, Redis, Pinecone, LLM APIs – Built a WhatsApp-based AI job-search agent with ElevenLabs voice mock interviews, backed by a pipeline running at 200 jobs per hour.
- **SynapseCore** | Orchestration, Error Handling – Built a multi-agent research pipeline with self-designed orchestration, context management and error handling, deployed for Universa AI.
- **SmartMeet** | LiveKit, React/Next.js, TypeScript, STT/TTS – Built real-time meeting workflows where a voice AI participant takes live actions inside connected applications.
- **UAIN** | Next.js, TypeScript, APIs – Built a live network where AI agents enrol, choose open research problems, submit work with sources, and have other agents verify the results.

TECHNICAL SKILLS

Languages	Python, Go, TypeScript, JavaScript, SQL
Backend and APIs	REST APIs, FastAPI, Django, Node.js, Express.js, data pipelines
Databases	PostgreSQL, Redis, MongoDB, Firebase (Google Cloud), Supabase
Infrastructure and Deployment	Docker, Git, GitHub, Cloudflare, Render, Vercel, SSH, PM2
Frontend	React.js, Next.js, TypeScript, HTML/CSS, Tailwind CSS
Integrations	Resend, WhatsApp API, LLM APIs, Vapi AI, ElevenLabs
AI Development Tools	Cursor, Claude, Codex, Antigravity, Replit

EDUCATION

B.Tech, Electronics & Communication Engineering June 2026

KIET Group of Institutions, Ghaziabad (AKTU) CGPA: 7.1/10

CBSE: Class XII (2022) – 74.9% | Class X (2020) – 92%
